GUIDE RAILS: possible configurations

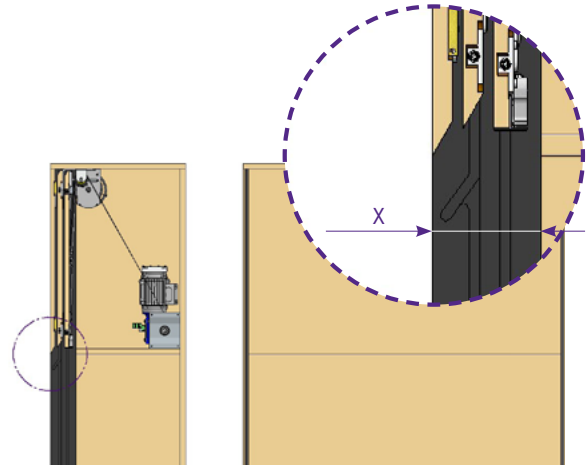

Standard

'Standard' is the base configuration in which a slot in the side is made from the front of the cabinet. (width = X)

The guide rails are glued in the slot, planar with the front of the cabinet.

Standard guide rails fitting for your cabinet, in HPL, 12 mm thick:

- black
- white

Front Covered

'Front Covered' is the configuration in which a slot in the side is made from the front of the cabinet + 4 mm. (width = X - 4 mm)

The guides are glued in the slot in the side of the cabinet, 4 mm from the front of the cabinet. The guides are not visible from front-on.

Front Covered guide rails fitting for your cabinet, in HPL, 12 mm thick:

- black
- white

Customized

'Customized' is the configuration where the grooves for the guide rails are recessed directly into the side of the cabinet.

This can only be done if the sides are sufficiently hard. (HPL/hard wood)

Another possibility is to glue a strip of HPL in the sidewall, glue this with a layer of laminate and recess it afterwards.

This way, the guide rails are invisible and become part of the cabinet itself.

- only recess-work
- material (HPL) + recess-work
